Diagram illustrating the step-by-step construction of a Huffman tree for 5 symbols (a, b, c, d, e) with frequencies 1, 1, 1, 1, 1.

Step 1: Initial symbols and frequencies: a (1), b (1), c (1), d (1), e (1).

Step 2: Symbols a and b are merged into a new node (ab) with frequency 2.

Step 3: The new node (ab) and c are merged into a new node (abc) with frequency 3.

Step 4: The new node (abc) and d are merged into a new node (abcd) with frequency 4.

Final Tree Structure: The root node (1000) branches into (abcd) (50%) and e (50%). The (abcd) node branches into (abc) (75%) and d (25%). The (abc) node branches into (ab) (50%) and c (25%). The (ab) node branches into a (50%) and b (50%).
